The European Commission, the Swedish Pulp and Paper Research Institute and xxx are proud to invite you to the European Conference on Pulp and Paper Research in Stockholm, Sweden on November 8-9, 1996.

Forrest products like pulp and paper have the potential of being truly environment friendly since they are based on a renewable resource -wood- and since the products are recovered and reused. Forrest products are an integral part of the human and social life in the european societies. DG XII of the European Commission has recognized that the technical development in this sector is very important in order to meet the challenges presented by the market today.

DG XII of the European Commission has supported pulp and paper oriented research as part of it's framework programmes, predominantly within FORREST and AIR, but also within ECLAIR. This conference aims at providing an interface between the EU-research and researchers involved, the Pulp and Paper industry and the academia. The conference will also provide opportunities for information about the European 4:th framework programme.

The European Conference on Pulp and Paper Research 1996 is targeted at researchers who are participating in, or have participated in, the relevant EU-programs, as well as representatives from the European Pulp and Paper related industries and academia, that want to share ideas about the "European Pulp and Paper Research - the present and the future".

Connected to the conference will also be a number of related activities, designed to stimulate dialogue between the parties concerned.
